

Calling all Chinese and Korean Families with Young Children!

YOU can contribute to the development of programs promoting healthy development of Korean and Chinese children by participating in this research study.

Purpose of this project:

- To understand how Chinese/Korean families develop and adapt to their lives in the US
- To learn what different factors can predict successful development in Chinese/Korean children in the US
- To understand how factors such as parents' physical health may be related to parenting and child development

What will I have to do?

Chinese/Korean/English-speaking personnel from our lab will meet you at your home at a time convenient for you. As part of the study, you will:

- Share about your experiences, parenting beliefs, and child's development
- Play with your child for 30 minutes
- Measure your family's hip, waist, height, and weight to assess physical health

WHAT DO I GET?

Who can join?

Families of Chinese or Korean ethnicities with children who are **3-6 years old**.

Participation is voluntary and confidential.

Earn up to **\$200** to thank them for their time.

Newsletters with summaries of our findings and helpful parenting information.

You will **help** other Chinese/Korean families & communities in the US and better equip organizations to meet the needs of Chinese/ Korean families.

Who Supports this project?

- National Institutes of Health (NIH)
- The Foundation for Child Development
- The Office of the Mayor of Baltimore City's Immigration Outreach Center
- Montgomery County's Offices of the County Executive

UMBC

Culture, Child and Adolescent Development Lab
